SAP SAC + DSP + BDC — Combined Training Program

45-Hour Program | 45 Topics | SAP Analytics Cloud (10h) + SAP Datasphere (25h) + SAP Business Data Cloud (10h)

Course Overview

This combined program takes SAP consultants end-to-end across the modern SAP data and analytics stack: SAP Datasphere (DSP) as the data integration and modeling foundation, SAP Business Data Cloud (BDC) as the managed business data fabric built on top of it, and SAP Analytics Cloud (SAC) as the primary consumption layer for BI, planning, and predictive analytics. Delivery is structured as one 1-hour session per day across 45 days, covering 45 modules end to end — 25 hours of SAP Datasphere, 10 hours of SAP Business Data Cloud, and 10 hours of SAP Analytics Cloud.

Target Audience

- SAP BW/BW4HANA and functional/technical consultants (FI/CO, S/4HANA) moving into cloud data, analytics, and planning roles
- Data engineers and integration consultants working on SAP data landscapes
- BI/Analytics consultants supporting SAC implementation projects
- Fresh Graduates keen to learn SAP
- Lateral who are looking for switch in SAP.
- Solution architects evaluating Datasphere, BDC, and SAC for enterprise data and analytics strategy

Prerequisites

- Basic understanding of database concepts and SAP data structures (tables, InfoProviders, or CDS views)
- Familiarity with the SAP ecosystem (S/4HANA, BW, or SAC) is helpful but not mandatory
- Prior BW/HANA modeling exposure is an advantage but not required

Learning Objectives

- Connect, integrate, and model data end-to-end in SAP Datasphere, including replication, data, and transformation flows
- Understand SAP BDC architecture and how it unifies Datasphere, SAC, BW Bridge, and Databricks
- Publish and consume data products via the Data Marketplace and BDC data products
- Build SAC data models, interactive stories, dashboards, and analytic applications
- Configure SAC planning models, data actions, and predictive forecasts
- Apply governance, lineage, security, and content lifecycle best practices across all three platforms

Hour Distribution (45 Hours, 45 Topics)

Track	Hours	Topics	% of Course
SAP Datasphere (DSP)	25 hrs	25	55.6%
SAP Business Data Cloud (BDC)	10 hrs	10	22.2%
SAP Analytics Cloud (SAC)	10 hrs	10	22.2%
Total (Combined Program)	45 hrs	45	100%

Day-Wise Summary

Day(s)	Duration	Focus
Days 1-13	13 hours	DSP: architecture, connections, replication / data / transformation flows
Days 14-20	7 hours	DSP: modeling — tables, views, ER models, analytic models, hierarchies, conversion
Days 21-25	5 hours	DSP: scripting, task chains, marketplace, security, consumption & administration
Days 26-31	6 hours	BDC: introduction, positioning, architecture, zero-copy data sharing
Days 32-35	4 hours	BDC: data products, governance, security, integration scenarios
Days 36-38	3 hours	SAC: foundations, connectivity, data modeling
Days 39-41	3 hours	SAC: stories, visualization, analytics designer
Days 42-45	4 hours	SAC: planning, predictive/smart features, security & integration

Detailed Session-Wise Lesson Plan (45 Hours)

Program sequence: SAP Datasphere (foundation) → SAP Business Data Cloud (built on Datasphere) → SAP Analytics Cloud (consumption, planning & predictive layer).

Sr. no.	Module	Topic	Key Content Covered
1	DSP	Introduction to SAP Datasphere	Positioning within SAP BTP; what problem it solves; the spaces concept.
2	DSP	Business Data Fabric Architecture	Business data fabric architecture overview; how Datasphere fits in.
3	DSP	Comparison with BW/4HANA	Key differences from BW/4HANA; when to use which.
4	DSP	Licensing & Roadmap	Editions and licensing; current roadmap and release themes.
5	DSP	Connections: S/4HANA & SAP BW(existing + Theory)	Connecting to S/4HANA and SAP BW as sources.
6	DSP	Connections: HANA & Non-SAP DBs(existing + Theory)	Connecting to HANA and non-SAP databases; connection types.
7	DSP	DP Agent Setup (Theory)	Data Provisioning Agent installation and configuration.
8	DSP	Cloud Connector Configuration-(Theory)	Cloud Connector setup; connectivity troubleshooting.
9	DSP	Replication Flows: Real-Time	Building real-time replication flows; source/target mapping.
10	DSP	Replication Flows: Batch & Monitoring	Batch replication; monitoring initial and delta loads.
11	DSP	Data Flows	Building data flows for transformation during load.
12	DSP	Transformation Flows	Transformation flows for in-database processing.
13	DSP	Scheduling & Orchestration	Scheduling pipelines; orchestrating multi-step loads.
14	DSP	Local & Remote Tables	Creating local tables; working with remote tables.
15	DSP	Graphical Views	Building graphical views for modeling and joins.
16	DSP	SQL Views	Writing SQL views; parameterization basics.
17	DSP	Entity-Relationship Models	Building entity-relationship models across tables/views.
18	DSP	Analytic Models: Measures & Dimensions	Defining measures and dimensions in analytic models.
19	DSP	Hierarchies	Building hierarchies for reporting and navigation.
20	DSP	Currency & Unit Conversion	Configuring currency and unit-of-measure conversion.
21	DSP	SQL Scripting	Advanced SQL scripting within Datasphere views.
22	DSP	Task Chain Automation	Automating multi-step processes with task chains.
23	DSP	Data Marketplace: Publishing & Consuming	Publishing data products; consuming SAP and partner data products.

Sr. no.	Module	Topic	Key Content Covered
24	DSP	Security & Data Access Controls	Row/column-level access controls; data masking; role provisioning.
25	DSP	Consumption: SAC, Power BI & Administration	Live connections to SAC/Power BI; monitoring and administration basics.
26	BDC	Introduction to SAP Business Data Cloud	What SAP BDC is and why it exists; SaaS delivery model.
27	BDC	BDC vs BW/4HANA vs Datasphere	Positioning BDC relative to BW/4HANA and Datasphere.
28	BDC	BDC Roadmap	Current roadmap, release themes, and adoption considerations.
29	BDC	Key Components: Datasphere & SAC	How Datasphere and SAP Analytics Cloud function as BDC building blocks.
30	BDC	Key Components: BW Bridge & Databricks(Theory of BW Bridge)	SAP BW Bridge and SAP Databricks integration within BDC.
31	BDC	Zero-Copy Data Sharing & Role-Based Access	Zero-copy sharing concept; role-based access model in BDC.
32	BDC	Data Products	Creating and publishing data products within BDC.
33	BDC	Data Products: Consuming & Monetization	Consuming SAP/partner data products; monetization models.
34	BDC	Governance: Metadata & Data Lineage	Metadata management, data catalog basics, lineage analysis, and quality/stewardship.
35	BDC	Security & Integration Scenarios	Data masking, row-level access, secure sharing; connecting BDC with S/4HANA, BW/4HANA, and third-party systems.
36	SAC	SAC Overview & Architecture	BI + Planning + Predictive in one suite; cloud architecture; Edge vs Cloud licensing; tenant structure.
37	SAC	Data Connectivity	Live vs Import connections; S/4HANA, BW/4HANA, HANA Cloud, Datasphere, Excel/OData sources.
38	SAC	Data Modeling	Model types (account- vs measure-based); dimensions, hierarchies, measures; currency conversion; version management.
39	SAC	Stories & Visualization	Canvas vs grid page story types; charts and tables; geo maps and widgets.
40	SAC	Filters, Linked Analysis & Storyboard Best Practices	Story filters, input controls, linked analysis; layout, color, and UX best practices.
41	SAC	Analytics Designer & Analytic Applications	Analytic applications overview; scripting basics; custom widgets; optimized story experience.
42	SAC	Planning: Models, Versions & Data Actions	Planning model setup; version types; basic and advanced/multi-action data actions.
43	SAC	Advanced Planning: Allocations & Value Driver Trees	Allocation logic for cost/revenue distribution; value driver trees; predictive planning and approval workflows.

Sr. no.	Module	Topic	Key Content Covered
44	SAC	Predictive & Smart Features	Smart Insights, Smart Discovery, search-to-insight, and predictive forecasting.
45	SAC	Security, Application Design & Integration	Teams/roles, content authorizations, mobile app, Digital Boardroom; integration and content lifecycle.

Delivery Notes

- Format: Instructor-led (virtual or classroom), with hands-on labs in live SAP Datasphere, SAP BDC, and SAP Analytics Cloud tenants
- Batch size: Recommended 8–15 participants for effective hands-on support
- Tools required: SAP Datasphere tenant, SAP BDC access (or trial), SAP Analytics Cloud trial/tenant, sample datasets
- Each module includes a short hands-on exercise or knowledge-check
- An optional 5-hour Q&A / case-clinic block can be added after the 45-hour core curriculum, structured as additional 1-hour daily sessions
