

SAP BDC + DSP

40-Hour Training Program — SAP Business Data Cloud (30%) & SAP Datasphere (70%)

Course Overview

This program gives SAP consultants a practical, hands-on grounding in SAP Datasphere (DSP) and SAP Business Data Cloud (BDC), reflecting their real-world relationship: Datasphere is the data-integration and modeling foundation, and BDC is the managed business data fabric built on top of it (alongside SAP Analytics Cloud, BW Bridge, and Databricks). Delivery is structured as one 1-hour session per day for 40 days, split 70% SAP Datasphere (28 hours) / 30% SAP BDC (12 hours). A separate block of 5 additional 1-hour Q&A/case-clinic sessions (Days 41-45) follows the core curriculum, over and above the 40 content hours.

Target Audience

- SAP BW/BW4HANA consultants moving into cloud data & analytics roles
- Data engineers and integration consultants working on SAP data landscapes
- Solution architects evaluating SAP Datasphere / SAP BDC for enterprise data strategy

Prerequisites

- Basic understanding of database concepts and data modeling
- Familiarity with the SAP ecosystem (S/4HANA, BW, or SAC) is helpful
- Prior BW/HANA modeling exposure is an advantage but not mandatory

Learning Objectives

- Connect, integrate, and model data end-to-end in SAP Datasphere
- Build replication, data, and transformation flows; automate with task chains
- Publish and consume data products via the Data Marketplace
- Understand SAP BDC architecture and how it unifies Datasphere, SAC, BW Bridge, and Databricks
- Apply governance, lineage, and security best practices across both platforms

Hour Distribution (40 Content Hours + 5 Q&A Hours)

Track	Hours	% of Core Curriculum	Note
SAP Datasphere (DSP)	28 hrs	70%	of the 40 content hours
SAP Business Data Cloud (BDC)	12 hrs	30%	of the 40 content hours
Total (Core Curriculum)	40 hrs	100%	—
Q&A / Case Clinic (additional)	5 hrs	not part of the 40	Days 41-45

Note: The 30/70 (BDC/DSP) split is applied to the 40 hours of core instructional content. The 5-hour Q&A block runs afterward as 5 additional 1-hour daily sessions and is not counted within the 40.

Day-Wise Summary (40 daily 1-hour sessions + 5-hour Q&A)

Day(s)	Duration	Focus
Days 1-13	13 hours	DSP: architecture, connections, replication/data/transformation flows
Days 14-20	7 hours	DSP: modeling (tables, views, ER models, analytic models, hierarchies, conversion)
Days 21-28	8 hours	DSP: scripting, task chains, marketplace, security, consumption & admin
Days 29-34	6 hours	BDC: introduction, positioning, architecture, data sharing
Days 35-40	6 hours	BDC: data products, governance, security, integration scenarios
Days 41-45	5 hours	Q&A / Case Clinic (additional, not part of the 40 content hours)

Detailed Session-Wise Lesson Plan (40 Hours)

Day	Hrs	Track	Module / Topic	Key Content Covered
Day 1	1 h	DSP	Intro to SAP Datasphere	Positioning within SAP BTP; what problem it solves; spaces concept.
Day 2	1 h	DSP	Business Data Fabric Architecture	Business data fabric architecture overview; how Datasphere fits in.
Day 3	1 h	DSP	Comparison with BW/4HANA	Key differences from BW/4HANA; when to use which.
Day 4	1 h	DSP	Licensing & Roadmap	Editions and licensing; current roadmap and release themes.
Day 5	1 h	DSP	Connections: S/4HANA & SAP BW	Connecting to S/4HANA and SAP BW as sources.
Day 6	1 h	DSP	Connections: HANA & Non-SAP DBs	Connecting to HANA and non-SAP databases; connection types.
Day 7	1 h	DSP	DP Agent Setup	Data Provisioning Agent installation and configuration.
Day 8	1 h	DSP	Cloud Connector Configuration	Cloud Connector setup; connectivity troubleshooting.
Day 9	1 h	DSP	Replication Flows: Real-Time	Building real-time replication flows; source/target mapping.
Day 10	1 h	DSP	Replication Flows: Batch & Monitoring	Batch replication; monitoring initial and delta loads.
Day 11	1 h	DSP	Data Flows	Building data flows for transformation during load.
Day 12	1 h	DSP	Transformation Flows	Transformation flows for in-database processing.

Day	Hrs	Track	Module / Topic	Key Content Covered
Day 13	1 h	DSP	Scheduling & Orchestration	Scheduling pipelines; orchestrating multi-step loads.
Day 14	1 h	DSP	Local & Remote Tables	Creating local tables; working with remote tables.
Day 15	1 h	DSP	Graphical Views	Building graphical views for modeling and joins.
Day 16	1 h	DSP	SQL Views	Writing SQL views; parameterization basics.
Day 17	1 h	DSP	Entity-Relationship Models	Building entity-relationship models across tables/views.
Day 18	1 h	DSP	Analytic Models: Measures & Dimensions	Defining measures and dimensions in analytic models.
Day 19	1 h	DSP	Hierarchies	Building hierarchies for reporting and navigation.
Day 20	1 h	DSP	Currency & Unit Conversion	Configuring currency and unit-of-measure conversion.
Day 21	1 h	DSP	SQL Scripting	Advanced SQL scripting within Datasphere views.
Day 22	1 h	DSP	Python-Based Transformations	Introduction to Python-based transformations.
Day 23	1 h	DSP	Task Chain Automation	Automating multi-step processes with task chains.
Day 24	1 h	DSP	Native HANA Cloud Objects via BAS	Using SAP Business Application Studio for native HANA objects.
Day 25	1 h	DSP	Data Marketplace: Publishing	Publishing data products to the Data Marketplace.
Day 26	1 h	DSP	Data Marketplace: Consuming	Consuming SAP and partner data products.
Day 27	1 h	DSP	Security & Data Access Controls	Row/column-level access controls; data masking; role provisioning.
Day 28	1 h	DSP	Consumption: SAC, Power BI & Administration	Live connections to SAC/Power BI; monitoring and administration basics.
Day 29	1 h	BDC	Introduction to SAP Business Data Cloud	What SAP BDC is and why it exists; SaaS delivery model.
Day 30	1 h	BDC	BDC vs BW/4HANA vs Datasphere	Positioning BDC relative to BW/4HANA and Datasphere.
Day 31	1 h	BDC	BDC Roadmap	Current roadmap, release themes, and adoption considerations.
Day 32	1 h	BDC	Key Components: Datasphere & SAC	How Datasphere and SAP Analytics Cloud function as BDC building blocks.
Day 33	1 h	BDC	Key Components: BW Bridge & Databricks	SAP BW Bridge and SAP Databricks integration within BDC.

Day	Hrs	Track	Module / Topic	Key Content Covered
Day 34	1 h	BDC	Zero-Copy Data Sharing & Role-Based Access	Zero-copy sharing concept; role-based access model in BDC.
Day 35	1 h	BDC	Data Products: Creating & Publishing	Creating and publishing data products within BDC.
Day 36	1 h	BDC	Data Products: Consuming & Monetization	Consuming SAP/partner data products; monetization models.
Day 37	1 h	BDC	Governance: Metadata Management	Metadata management concepts; data catalog basics.
Day 38	1 h	BDC	Governance: Data Lineage & Quality	End-to-end lineage analysis; data quality and stewardship.
Day 39	1 h	BDC	Security in BDC	Data masking, row-level access, and secure sharing across BDC.
Day 40	1 h	BDC	Integration Scenarios	Connecting BDC with S/4HANA, BW/4HANA, third-party systems; migration patterns.

Q&A Session Schedule (5 Hours — Additional)

The 5-hour Q&A/case-clinic block runs after the 40-hour core curriculum, as 5 additional 1-hour daily sessions covering both SAP Datasphere and SAP BDC. It is not counted within the 40 content hours.

Day	Hrs	Track	Module / Topic	Key Content Covered
Day 41	1 h	Q&A	Q&A / Case Clinic Session	Open Q&A on Datasphere connections, integration flows & modeling (Days 1-19).
Day 42	1 h	Q&A	Q&A / Case Clinic Session	Open Q&A on Datasphere scripting, marketplace, security & consumption (Days 20-28).
Day 43	1 h	Q&A	Q&A / Case Clinic Session	Open Q&A on BDC introduction, architecture & data products (Days 29-36).
Day 44	1 h	Q&A	Q&A / Case Clinic Session	Open Q&A on BDC governance, security & integration scenarios (Days 37-40).
Day 45	1 h	Q&A	Q&A / Case Clinic Session	Final recap across both DSP and BDC; certification guidance; feedback & next steps.

Delivery Notes

- Format: Instructor-led (virtual or classroom), hands-on labs in live SAP Datasphere / BDC tenants
- Batch size: Recommended 8–15 participants for effective hands-on support
- Tools required: SAP Datasphere tenant, SAP BDC access (or trial), sample datasets, SAP Business Application Studio
- Each module includes a short hands-on exercise or knowledge-check
